

SECURITY TRAINING SOLUTIONS

Empowering people through knowledge.

HBA STATEMENT ANALYSIS OVERVIEW:

STS's *Security Sciences Program* is a series of extreme professional development programs designed by STS to "Empower people through knowledge". HBA Statement Analysis is part of our Investigator's Toolbox within the Security Sciences Program.

HBA Statement Analysis is the process of analyzing written or verbal statements to identify the potential for inappropriate criminal behavior including lying which ultimately can assist in guiding questioning during interviewing and interrogation. Statement Analysis has a wide area of application and is currently being used by law enforcement, private investigators, private industry and military organizations throughout the world. Our training program is ideal for a wide audience from the suspecting spouse to companies conducting internal investigations of theft and fraud, all the way to law offices building cases.

This introductory course aims to challenge students to think outside the box and place themselves in the role of the adversary. Use of these techniques can dramatically reduce the time required for investigations. Analyzing the written statements does not require interaction with the subject or even knowledge of the case. Learning is enhanced with live simulations and interactive exercises.

Course agenda:

- Introduction: What is HBA Statement Analysis
- Introduction to Linguistics
- How to Conduct Statement Analysis
- Other Crime Fighting Tools
- Case Study Assignment

Related workshops offered by STS include:

- Human Behaviour Analysis
- Tactical Interviewing
- HBA Predictive Profiling
- and more...

Administration:

- Materials/books will be provided.
- Certificate of participation will be issued upon successful completion.
- It is recommended that participants attend Human Behaviour Analysis as a prerequisite before attending this course.
- Module fee \$125 each.
